

greenscreen®

Environmental Policy

As a product manufacturer/representative, **greenscreen®** considers environmental conservation, preservation and protection to be consistent with our overall goals and values as well as an important consideration in our total activities. Increasingly, society is placing a greater emphasis on the protection of the environment, and we believe that it is both a good business practice and our duty to protect the natural resources of the communities that we serve.

It has been and will continue to be our policy to conduct business in an environmentally sensitive manner that aims to reduce our impacts and conserve the most natural resources. Strict compliance to regulatory requirements is considered the minimum standard of corporate citizenship and we are committed to making conservation an integral part of policies, programs and practices for conducting operations in an environmentally, as well as economically, responsible manner. To this end, **greenscreen®** is committed to demonstrating to partners, suppliers, contractors, customers and the community, responsible environmental management, planning and implementation while continuing to be an environmentally conscious company. Just as important is the commitment to openly share environmental solutions, conservation procedures and research outcomes with others with the hope of making all of us better stewards of the environment.

With full commitment and endorsement, we will undertake initiatives by:

- Establishing corporate environmental objectives and targets relevant to the environmental impacts of activities and a means to measure progress against these objectives. These objectives shall be reviewed and revised as necessary.
- Increasing the environmental consciousness and training of our employees, supply chain and community to ensure their involvement and to minimize the environmental risk where we live and work.
- Appraising, assessing and implementing practices that minimize waste generation, maximize and promote efficient use of energy and water.
- Seeking strategic partnerships with like-minded companies to help reduce the impacts of transportation, minimize the use of non-renewable energies, maximize amounts of post-consumer content and promote the reclamation, reuse and recycling of the product at the end of the lifecycle.
- Making environmental demands on materials, products and services through dialogue and cooperation with suppliers and contractors.
- Leveraging technology and corporate education to support proper and efficient resource allocation.
- Encouraging, financing and reporting on significant research that benefits our company, the industry and the business community as a whole.
- Openly reporting findings and engaging in positive dialogue with interested parties about the mechanisms involved to improve on the findings of our environmental efforts.
